

The Fit Guide

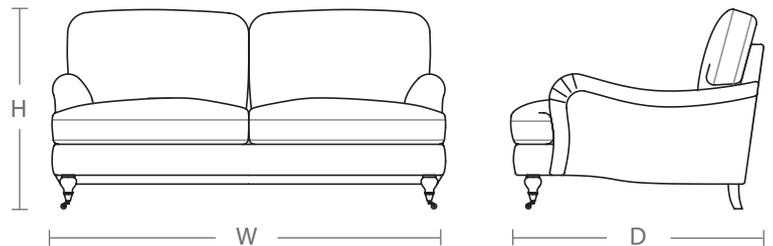

It's important to make sure that your lovely new Lombok product will be able to get into its new home. This guide will help you measure up your space to ensure our delivery team will be able to get it through the door and into its perfect place.

Any questions? Give our customer service team a call on 020 7736 5171

1 - YOUR SOFA MEASUREMENTS

Write down the dimensions of your sofa in the space below. You can find all dimensions at lombok.co.uk. You'll need to refer to these while you measure up.

H W D

HANDY TIPS

- The legs/plinths come off most of our sofas which can lower the height by up to 19cm.

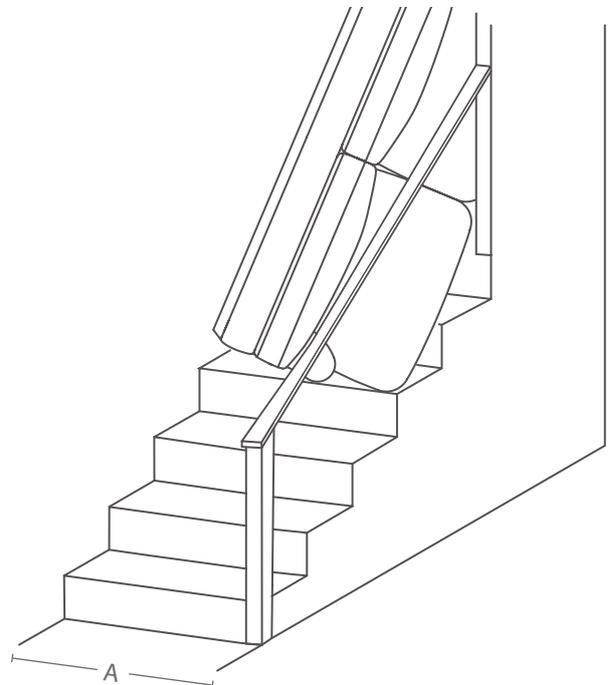

2 - GOING UPSTAIRS

If your sofa needs to go up stairs, measure the width of the staircase at its narrowest point and record it below.

A

HANDY TIPS

- Remember to take any handrails or light fixtures into account. If this distance is wider than the depth (D) or height (H) of your sofa then it should fit.
- If you have a bannister and need to lift it over, check that the distance between the bannister and the ceiling is greater than the depth (D) or height (H) of the sofa at the narrowest height.
- Once at the top of the stairs, make sure there is enough room on the landing for our delivery team to manoeuvre your sofa into the right room. Measure the width, depth and height of your landing.

3 - THE FRONT DOOR

Open your door as wide as possible and measure from the outer edge of the door to the inner edge of the door frame (B). Always measure from the narrowest point.

Compare the width of your door frame with the depth (D) or height (H) of your sofa allowing some wiggle room either side. This will determine if we can take the sofa through the door. If the door width is greater than the depth (D) or height (H) of your sofa, then it will fit through.

If the width of your front door is too narrow, then our delivery team can try to bring your sofa through upright. In this instance, measure the height of your doorway (C) making sure that it is greater than your sofa width (W). Again, check that there is some wiggle room.

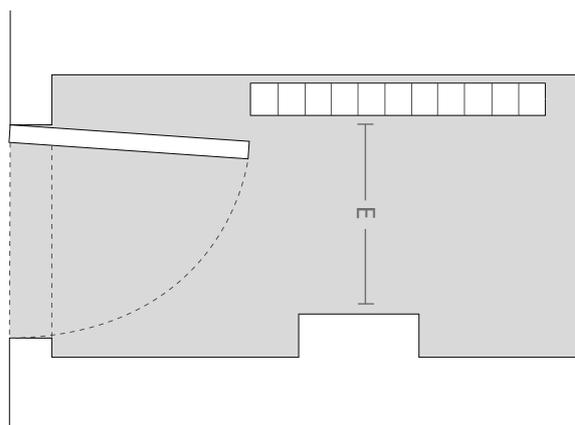

B C

4 - HALLWAYS & INTERNAL DOORS

Measure the width of your hallway at its narrowest point (E) and check if it's wider than the depth (D) or height (H) of your sofa. Don't forget to consider light fixtures and handrails in your measurements.

For internal doors follow the same instructions in section 3 'THE FRONT DOOR' ensuring there is enough space inside and outside the room to manoeuvre.

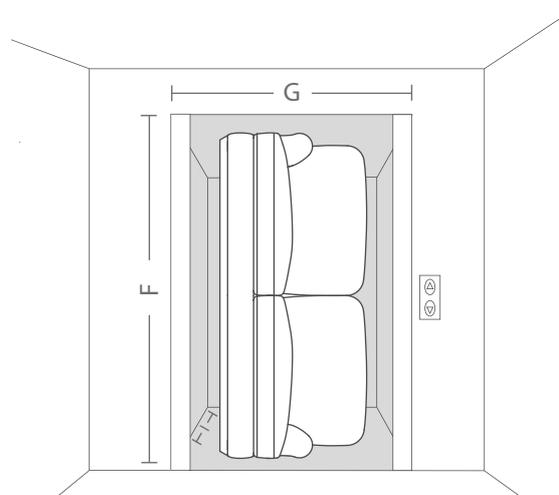

E

5 - LIFTS

Does your building have a lift that we'll need to use? If so, measure the open-door height (F) and width (G), and the depth (I) of the lift to make sure it will fit inside. If the dimensions are greater than the width (W), height (H) and depth (D) of your sofa, you're fine.
